

BORICE Update Log

1. November 2012: BORICE 1.0 was released with the paper.
2. June 2013: BORICE 1.1 updates this earlier release to correct an error encountered when trying to run datasets consisting of single-offspring families with missing data. The earlier version of BORICE attempted to infer a maternal genotype at those loci, but could not do so because there was no progeny information. The program has now been updated to skip those loci.
